

Dual-Sourcing Vs. Sole Sourcing for Building Automation Controls

*State of Washington GA Conference
November 2, 2005
Tacoma, WA*

Topics

- History, Standards, & Capabilities of Open Systems
- BACnet & LonMark: Is BACnet always the best choice?
- Dual-Source Purchasing: 2003 Case Study – City of Seattle
- Installing a New System or Upgrading Your Existing Proprietary System.

History

- 1980's Pneumatic → DDC
- Proprietary only viable DDC system originally
- Price Gouging a major impetus for ASHRAE to begin development of Open Systems Protocol → BACnet
 - Also Interoperability, Communication, and Standardization
- Parallel to this was LonWorks development. In some ways an effort on the part of Proprietary manufacturers to compromise

Current Standards Of Interest, Issues & Aims

Certification	BACnet	LonMark / LonWorks
ASHRAE	135-2001, 2004	
European	EN/ISO 16484-5	
ANSI/EIA/CEA	135-2001, 2004	EIA/CEA 709.1b, 709.3, 709.2, 852
Testing Standards	135.1 (ASHRAE) BTL Certification	LonMark Certification
Other	ISO 16484-5, KS X 6909	

- Quality
- Interoperability
- “Replace-ability”

BAS Protocols Market: Forecasts by Technology (NA) 1998 - 2008

"BACnet currently has a 4 to 1 advantage over LonWorks in new systems installations"
"By 2008 as many BACnet systems will be installed as the total base of all proprietary systems"

BAS Protocols Market: Forecasts by Technology (NA) 2004 - 2028

Within 10 years BACnet systems will be the majority system of choice.
Within 25 years BACnet systems will represent 75% of all installed BAS.

OP Systems Are Impacting Efficiency, Management, & Conservation

- Data Interchange
- Remote Management
- Value Added Services
- Resource Sharing
- Conservation
- Training
- Inventory
- IAQ
- Easy Implementation of “State of the Art” Equipment
- Future → Wireless Remodels

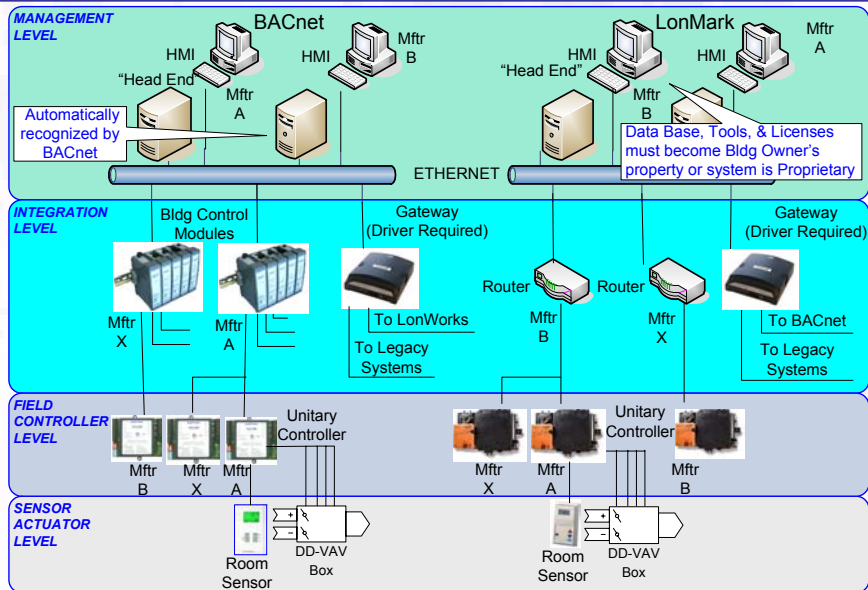

Latest Technologies For Low Cost Vendor Neutral BAS

- **BACnet**
 - HMI programming essentially automatic
 - Network data available to multiple systems automatically
- **LonMark**
 - HMI requires significant additional programming
 - Network data available to multiple systems with significant programming overhead
- **Web Based (Intra/Internet)**
- **Gateways**
- **Modbus**

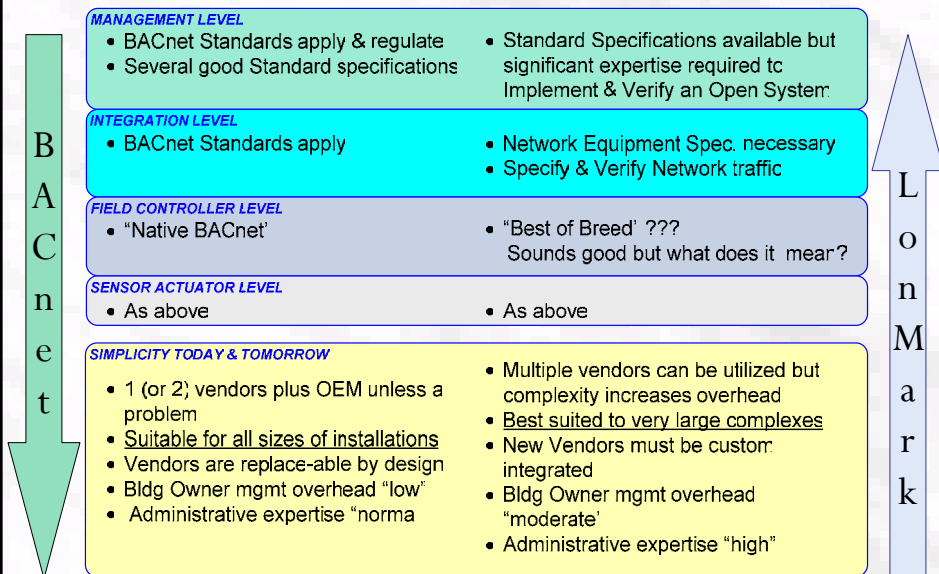

How BACnet and LonMark Integrate Vendor Neutral Systems

14

The Case For Simplicity: BACnet or LonMark?

16

Copyright 2005 Strategic Equity Associates, LLC - All Rights Reserved

Use Open Protocol Systems To Avoid Proprietary “Lock”

- Problem #1: Installing New System
 - Minimum Bldg Owner overhead?
 - “Replace-able” vendors or Interchangeable parts?
- Problem #2: Integrate to Existing System
 - Maintain existing long-term relationship
 - Move towards the future
 - Minimum Bldg Owner overhead
 - Minimum complexity for Staff
 - Minimum System Hierarchy
 - **Dual-Source?**

NO

18

2003 Study for City of Seattle

- **Reason:**
 - **High and escalating cost of Proprietary Controls**
- Study Topics:
 - Verify the Sole-Source Provider's Gross Margin %
 - Compare to standards for Industry
 - Approximate excess costs on recent jobs & bids
 - Rough comparison of price to market

19

Copyright 2005 Strategic Equity Associates, LLC - All Rights Reserved

Approximate excess costs on recent City Projects & Bids

51% Above Competition! \$1.5 Million!

21

Copyright 2005 Strategic Equity Associates, LLC - All Rights Reserved

In Summary: 2003 City of Seattle Study

- **Verify Sole Source Provider's Gross Margin**
 - Historically up to 45%, currently 38% is a reasonable estimate (to City after pressure was applied)
- **Compare to standards for Industry**
 - Industry standard for competitive bid work 14 – 28%
 - Industry standard for negotiated work 26 – 35%
- **Approximate excess costs on recent jobs**
 - On \$4,617,000 of bids, excess costs were \$1,564,000
- **Rough comparison of price to market**
 - 25% to 51% above market price

Options??? Audit? Change Vendor? Dual Source?

Industry Consensus: Proprietary Controls Provider Pricing

With and Without Competition

23

Are These One-time Costs or do they Continue?

Basis for City of Seattle's Decision:

- Single Facility or Multiple Buildings?
- Normal Growth or Steady State?
- Major Maintenance & Upgrades?
- Preventative Maintenance and Service?

Your Situation?

Alternatives to Sole-Sourcing

- Competitive Bidding
- Sole-Sourcing with Independent Audit
- Replace Current Vendor by Competitive Bid
- Dual-Sourcing
 - Pros
 - Pricing at or near market -- "Policing" not required.
 - High Quality easily achievable
 - Training, Maintenance, Inventory & Supply easily manageable
 - Redundant solutions.
 - Cons
 - Minor increase in complexity

26

If Two then Who? What We Wanted at the City of Seattle

- Price challenger to current controls provider
- One of top controls suppliers in North America
- Innovation and Flexibility
- High quality local organization growing for the future
- Long Term Commitment - Service & Support
- Cost Effective Product & Installation
- BACnet Interoperability & ASHRAE Standard
- Unlimited Software License

North American Building Automation Controls Market

Note : Source BCS and Novar estimates, product based at manufacturers' selling prices and excludes sensors, actuators, peripherals, software, labor, maintenance and service. Total BCS market estimated at US\$375m in 2001. Total market for building controls products and services, (ie. Including all the above) was US\$3,425m

City Of Seattle Decision Process For 2nd Vendor Selection

Incremental Commitment

- Phase 1
 - Field Trips, Lunch & Learns, Training Materials
 - No real cost other than time commitment
- Phase 2
 - Trial Projects, Training
 - A small commitment of funds
- Phase 3
 - Major Project
 - Commitment of significant funds
- Phase 4
 - Specification Change
 - Policy Change
 - Major commitment to Long-term Relationship

A Capability Rich System That Allows Migration to the Future!!

32

Copyright 2005 Strategic Equity Associates, LLC - All Rights Reserved

Where Are You Going? What Are You Paying?

- Paradigm Shifts
 - 1980's Pneumatics → DDC
 - NOW Proprietary → Open Systems
Sole-Source → Dual-Source

In the past two years I have found numerous Municipalities, Institutions, School Districts, Hospitals, and Laboratories in a similar situation.

- No clear plan for Growth
- “Locked-In” Pricing

33

New System: What Choices Should You Make?

Steps --

- Replaceable vendors or interchangeable parts?
- Capabilities of vendors and their pricing history?
- How best to limit the “real-world” complexity?
- What are my staff’s capabilities?

(BACnet is usually the simplest path to real economic benefit)

Existing System: What Choices Should You Make?

Steps --

- What are you paying compared to the market?
- Change your specifications ~ Require Open Protocol
- Negotiate diligently with your current vendor
- If a substantial Price Difference still exists, then Dual Source
 - *A logical first step in many situations also.*

Action Plan / Summary

New Complex or Full Replacement

1. System Size?
2. Pre-qualify bidder(s) by RFP
3. When you specify BACnet, specify "Native BACnet"

Connect to Existing Proprietary System

1. Can existing long-term relationship be maintained?
2. Specify "Existing Proprietary and/or Native BACnet"
3. Dual-Source, don't go back to Competitive Bid

4. Develop a Growth Plan
5. Minimize Complexity & Bldg Owner Overhead
6. Choose a Major North American Supplier - They'll still be here in 10 years!

36

Which Direction?

- Open Protocol
- Native BACnet
- Dual Source
